

INTRODUCTION TO THE NEUROSCIENCE OF LEADERSHIP FOR EDUCATORS

Wednesday 23rd March 2022
9 am to 3 pm
Hobart, Tasmania

This introductory but powerful one-day workshop is suitable for educators, education leaders or aspiring leaders, and guidance officers who wish to reflect on and find new ways to work more effectively and productively with their teams and colleagues and with students and gain a deeper understanding into 'why people do what they do'.

As a leader and educator, you are dealing with accelerating change in a complex adaptive system. It's time to develop a new way of being, by navigating the complexity of human behaviour through the lens of neuroscience.

To thrive in this evolving environment a new set of leadership and self-leadership skills, a new leadership mindset, and new communication strategies are required.

Leaders and educators must learn how to:
Show up differently
Listen differently
Engage differently

Imagine if you could deal with complex human behaviour through the lens of neuroscience using simple but powerful frameworks to help you to 'diagnose' what is going on for you and for others and help you to 'prescribe' different and more useful, more powerful, and more influential resolutions to the normal but challenge people challenges that you deal with daily.? How would that impact how you lead and motivate?

More has been learned about the human brain in the last 30 years in all of history and this new science is changing the way you need to think and communicate with those around you, and how you need to self-lead to ensure that every single human can bring their best.

Understanding what REALLY makes humans tick, what motivates and demotivates us, how we are wired, how YOU are wired and why your often well-intentioned interactions can sometime have the opposite effect is a critical skill and strategy base for leaders, educators, and guidance officers in a post-pandemic world.

In this program you will:

- Reflect on and gain a deeper understanding around why leading humans can be so hard and why humans find change so difficult
- Uncover a new leadership model for a new age
- Learn How humans are really WIRED
- Understand the Brain's True Organisational Principle (which challenges Maslow's Hierarchy)
- Discover how YOU are WIRED (we will brain map you!)
- Learn simple frameworks and strategies to begin using to connect and work productively with others
- Receive one month's access to our online self-study 'How Humans are Wired Program' to review and embed the learning from the day

COST: AUD \$ 549.00 plus GST
